

Owner proof checklist

AIRIN's code-level product gates are mostly covered by automated launch suites. Full launch readiness still requires owner-supplied production proof inputs for provider health, one real paid purchase-history smoke, Stripe dashboard branding, and Supabase Auth settings.

owner proof required	proof inputs missing until owner/dashboard checks are supplied	4	0 failed, 0 blockers
CURRENT STATE	EXPECTED PRE-OWNER GATE	PROOF BLOCKERS	LAUNCH-READY TARGET

Owner proof preflight

```
npm run launch:proof-inputs
```

Canonical launch-ready gate

```
BASE_URL=https://airinetwork.com \  
LAUNCH_MACHINE_SECRET=<prod-machine-secret> \  
PURCHASE_TOKEN=<real-recovery-token> \  
ORDER_ID=<real-order-id> \  
STRIPE_DASHBOARD_SMOKE=passed \  
SUPABASE_AUTH_DASHBOARD_SMOKE=passed \  
npm run launch:gate
```

1. Kit and Resend provider health

Proof: The production machine-health probe must accept the production machine secret and verify Kit + Resend health.

- Set LAUNCH_MACHINE_SECRET to the production MACHINE_SECRET.
- Run the full launch gate against https://airinetwork.com.
- Confirm Resend airinetwork.com domain health and Kit form/tag/sequence health pass.

```
Gate input: LAUNCH_MACHINE_SECRET=<prod-machine-secret> npm run launch:gate
```

2. Paid purchase history smoke

Proof: A real paid or recovered order must produce a PDF and attach to the signed-in user's My Reports history.

- Buy or recover a Stack Audit purchase using the production flow.
- Record PURCHASE_TOKEN and ORDER_ID for automated proof, or set PAID_PURCHASE_SMOKE=passed after manual proof.
- Run BASE_URL=https://airinetwork.com PURCHASE_TOKEN=<token> ORDER_ID=<order-id> npm run launch:purchase-proof for the fast PDF proof.
- Sign in, save the recovered purchase to My Reports, download Original PDF, and regenerate Latest PDF.
- Confirm the report remains available after refreshing and signing back in.

```
Gate input: PURCHASE_TOKEN=<token> ORDER_ID=<order-id> npm run launch:gate
```

3. Stripe dashboard descriptor and receipt proof

Proof: Stripe dashboard settings must be manually confirmed because descriptor/product/receipt branding live outside git.

- Confirm statement descriptor is AIRIN.
- Confirm product names, receipt branding, support email, and checkout success URLs match AIRIN launch copy.
- Set STRIPE_DASHBOARD_SMOKE=passed only after confirmation.

Gate input: STRIPE_DASHBOARD_SMOKE=passed npm run launch:gate

4. Supabase Auth dashboard proof

Proof: Supabase Auth settings must be manually confirmed because Site URL, OAuth redirects, and email templates live outside git.

- Confirm Site URL, Google OAuth redirect, magic-link redirect/templates, and auth sender/domain.
- Verify the deployed auth flow after any dashboard change.
- Set SUPABASE_AUTH_DASHBOARD_SMOKE=passed only after confirmation.

Gate input: SUPABASE_AUTH_DASHBOARD_SMOKE=passed npm run launch:gate
